Q:) Talus is transported by \_\_\_\_\_  
(BECIL NMRC JE CIVIL 15.09.2019)

Alluvial →

A : Water

~~B : Gravitational force~~

C : Glacier

D : Wind

→ Colluvial soil

→ Aeolian Soil.

→ Marl, Varved clay  
Outwash.

(B)

Q:) Honeycomb structure is found in \_\_\_\_\_.

(BECIL NMRC JE CIVIL 15.09.2019)

A : Course sand

B : Fine slit and clay

C : Highly plastic clay

D : Gravels

B

Q:) Negative pore pressure can develop in \_\_\_\_\_.  
(Civil ESIC JE 2019)

A : Loose sand and over-consolidated clays

☒ B : Dense sand and over-consolidated clays

C : Loose sand and normally consolidated clay

D : dense sand and normally consolidated clays

(B)

Q:) Geologic cycle for the formation of soil, is .....

(SSC JE 2 march 2017 evening shift)

OR

The geological cycle of the formation of the soil is

(HPSSSB JE 03-07-2016)

A : Upheaval → transportation → deposition → weathering

B : Weathering → upheaval → transportation → deposition

C : Transportation → upheaval → weathering → deposition

☒ D : Weathering → transportation → deposition → upheaval

D.

Rock.

Q:) The collapsible soil is associated with:  
(UPRVUNL JE 09-11-2016)

A : Dune sands

B : Laterite soil *Laterite Soil.*

C : Black cotton soil

~~D : Loess soil~~

D.

*vol. pressure - constant*

Q:) In soil engineering what is the volumetric relationship that defines-porosity?

(SSC JE 23-09-2019 morning)

$$n = \frac{V_v}{V}$$

A : The ratio of the volume of water to the volume of voids

B : The ratio of the volume of air to the total volume

C : The ratio of the volume of voids to the volume of solids (Void ratio)

D : The ratio of the volume of voids to the total volume

D. Soil man.

$$e = \frac{n}{1-n}$$

$$[0 < n < 1]$$

Q:) Which one of the following parameters can be used to estimate the angle of friction of a sandy soil-  
(RRB JE Shift-III 30.08.2015)

A : Particle size

B : Roughness of particle

☒ C : Density index

D : Particle size distribution

C

$\phi < 30^\circ$   $< 20$  <sup>very</sup> loose sand  
20-40  
40-60  
60-80  
 $> 80$  dense sand  
 $> 45^\circ$

Q:) In a wet soil mass, air occupies one-sixth of its volume and water occupies one-third of its volume. the void ratio of the soil is:

(L.M.R.C. JE 2015/ESE 1995, 2010)

A : 0.25

B : 0.5

C : 0.33

~~D : 1.5~~

$$e = \frac{V_v}{V_s} = \frac{1/6 + 1/3}{1/2} = 1$$

**Q:) The property of sand by virtue of which it takes any desired pattern shapes under pressure and retains it after the pressure is removed is known as:**

**(RRB SSE Shift-III 01.09.2015)**

- A : Plasticity**
- B : Flow ability**
- C : Porosity**
- D : Collapsibility**

Q:) The diameter of the sieve used for finding liquid limit is.....

(SSC JE 23.09.2019 evening)

A : 376 microns

B : 250 microns

C : 125 microns

☒ D : 425 microns

120gm sand.

☒  $\phi$   $\rightarrow$  Casagrande tool  $\checkmark$   
 $\rightarrow$  ASTM.

Q:) The liquid limit is determined from casagrade apparatus. The apparatus consists of a semispherical brass cup that is repeatedly dropped onto a hard rubber base from a height of:

(DFCCIL Civil JE 10.11 2018)

A: 10 mm

B: 15 mm

C: 5 mm

D: 20 mm

Q.

**Q:) The height of free fall of cup while determining liquid limit by using cassagrade's liquid limit device should be-**

**(SSB Himachal pradesh 18-11-2018/ DFCCIL Civil JE 10.11.2018)**

- ☒ **A : 1 cm**
- B : 0.5 cm**
- C : 2 cm**
- D : 1.5 cm**

10mm

**(DMRC 18.04.2018 4.30 pm)**

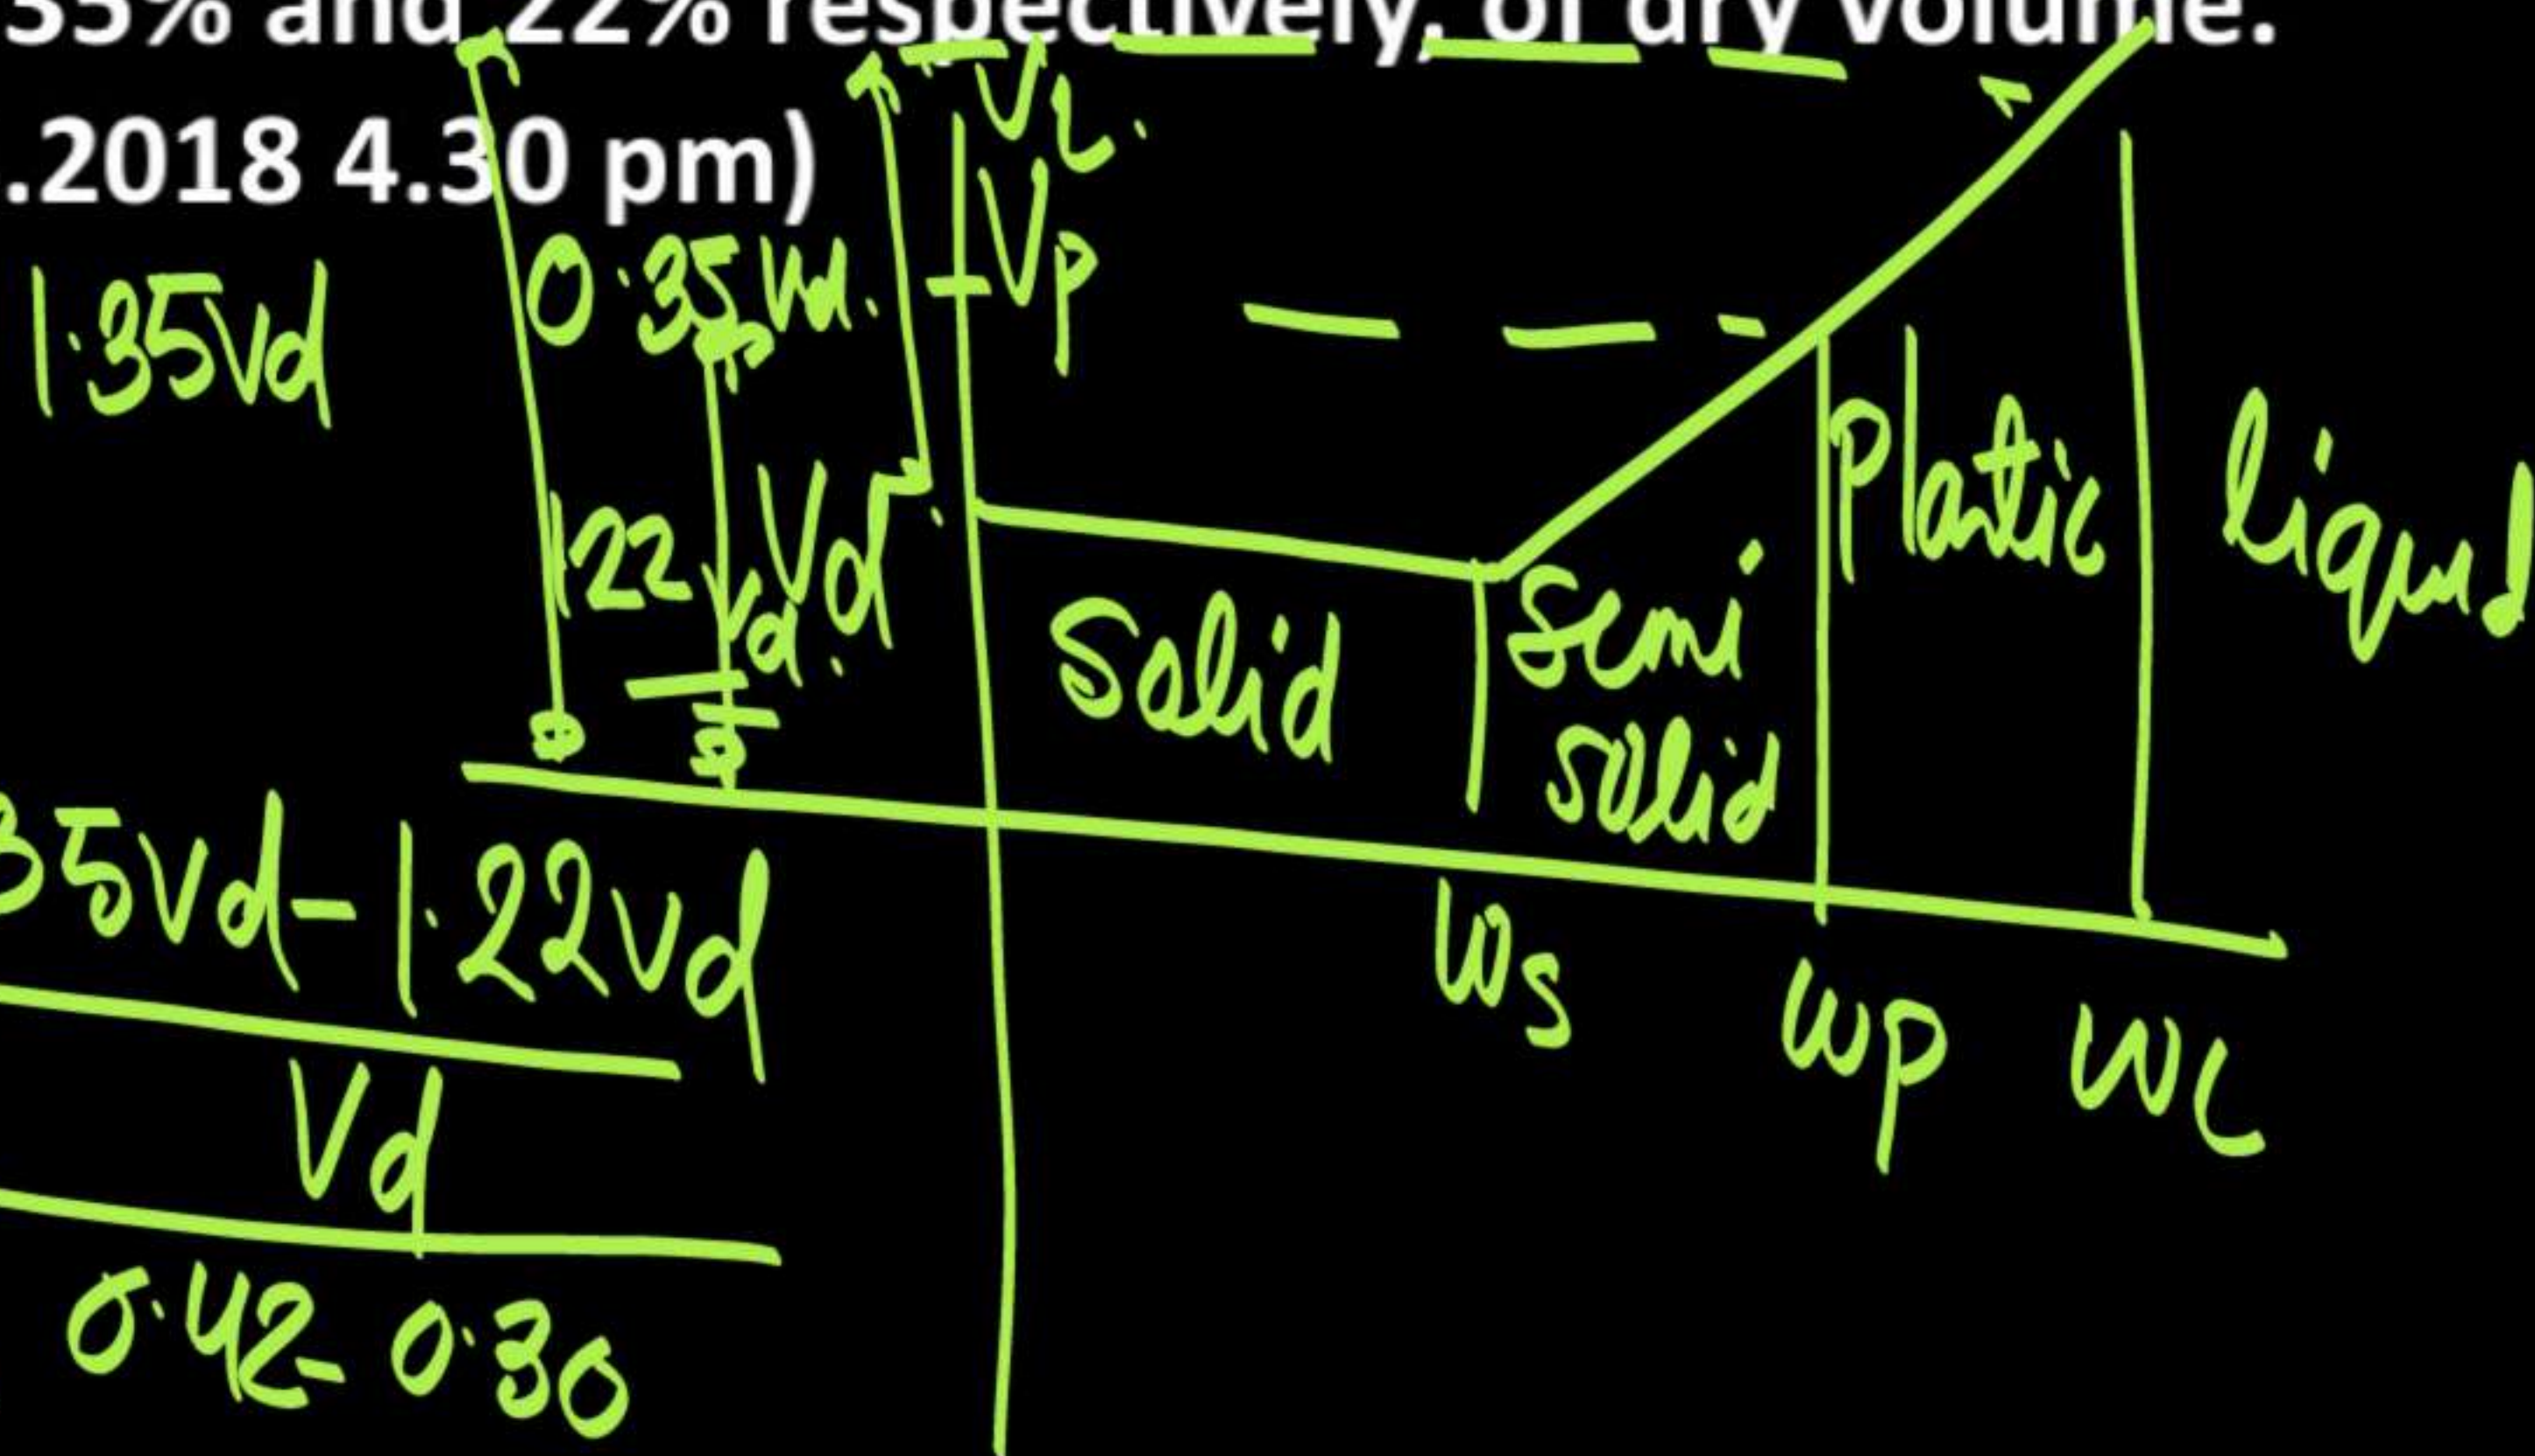

**B : 1.83**

**C : 0.74**

**D: 1.083**

$$= \frac{1.35V_d - 1.22V_d}{V_d}$$

$$S.R = \frac{V_1 - V_2}{V_d} \cdot \frac{1}{\omega_L - \omega_p}$$

**Q:) Which of the following represents the range of plasticity index for silt?**

**(SSC JE 29-01-2018 evening shift)**

 **A : 10 to 15**

**B : 15 to 25**

**C : 25 to 35**

**D : 35 to 45**

Q:) A soil sample has liquid limit as 45%, plastic limit as 25% and shrinkage limit as 14% for a natural water content of 30%, the liquidity index of the soil will be (UK combined AE Paper-I, 2012)

A : 0.75

B : 0.8

☒ C : 0.25

D : None of the above

(C)

$$I_L = \frac{W_N - W_p}{W_L - W_p}$$

$$(I_c + I_L = 1)$$

$$\frac{30 - 25}{45 - 25} = \frac{5}{20} = \frac{1}{4}$$

**Q:) Which one in the following list does not possess plasticity?**

**(UKPSC AE Paper-I 2007 & 2012)**

**A : Benotonite**

**B : Kaolinite**

**☒ C : Rock flour**

**D : Fat clay**

Q:) The water content of soil which represents the boundary between plastic state and liquid state is known as:

(Rajasthan JE 2015/ ISRO 2015 / UPPCL JE 2013/ BSPHCL JE Civil 29.01.2019 Batch-2)

A : Liquid limit

B : Plastic limit

C : Shrinkage limit

D : Plasticity index

Q.

Q:) This is a field method of determining rough value of ~~the~~ water content:

(M.P. SUB. ENG. morning 4 april 2016)

A : Sand bath method

B : Calcium cabide method

C : Pycnometer method

D : Oven drying method

↳ Best method.

— Snicker.

Q:) Swelling potential of a soil is indicated by:  
(HPSSSB JE 03-07-2016)

A : Sensitivity of the soil

B : Activity of the soil

C : Permeability of the soil

D : Compressibility of the soil

B-

$$\frac{IP}{2u} < 0.75$$

$$0.75 - 1.25$$

0 (P.L) or Low Swelling 71.25  
0-15  
15-25

25-35 — High swelling

**(DDA JE 23.04.2018 First shift)**

**B : Cl**

~~C~~: ML

**D : MH**

Q:) The coefficient of uniformity of a soil is 16 and the coefficient of curvature is 1, then what is the ratio

$D_{60}/D_{30}$ ?

(DDA JE 23.04.2018, 12:30-2:30 pm)

A : 1

B : 4 (B.)

C : 3

D : 2.0

$$C_u = 16$$

$$C_c = 1$$

$$C_u = \frac{D_{60}}{D_{10}} = 16$$

$$\frac{D_{60}}{16} = D_{10}$$

$$C_c = \frac{D_{30}^2}{D_{60} \times D_{10}}$$

$$\frac{D_{60}}{D_{30}}$$

$$D_{60} \times \frac{D_{60}}{16} = D_{30}^2$$

$$\frac{D_{60}^2}{16} = D_{30}^2$$

$$\frac{D_{60}}{D_{30}} = 4$$

Q:) In liquid limit test, casagrade tool cuts a groove of .... mm wide at bottom.

(DMRC JE 12.04.2018 12:15 pm)

A : 13.7

B : 8

 C : 11

D : 12

Q:) The minimum size of grain of silt is about  
(SSC JE 2015)

☒ A : 0.06 mm

B : 0.2 mm

C : 0.5 mm

D : 1 mm

☒ A

0.002 mm.

75  $\mu$  - 2  $\mu$ . silt.

< 2  $\mu$  - clay

Q:) If the material of a plane of a casagrade, liquid border device is soft in comparison to the standard hard rubber on which a cup filled with clay paste falls, then (LMRC JE 2016)

- ☒ A : Liquid limit of soil always rise
- ☐ B : The liquid limit of clay may rise
- ☐ C : The liquid limit of clay may ~~rise~~ fall
- ☐ D : Liquid limit of soil always declines

Q:) A clay in flocculated structure has....  
(Civil ESIC JE 2019)

A : Low permeability, low strength and high compressibility

B : High permeability, high strength and low compressibility

C : Low permeability, high strength and low compressibility

D : High permeability, high strength and high compressibility

**Q:) What will happen to the permeability of soil mass if air is entrapped in its voids?**

**(LMRC JE 13.05.2018 Shift-I)**

**A : Increases**

**~~B : Decreases~~**

**C : Entrapped air doesn't affect permeability**

**D : Depends on the viscosity of the fluid**

Q:) Keeping the compaction curve in mind. The soil that is in wet part.

(NWDA JE 2019 (12.30 to 2:30 pm))

A: Optimum area has higher permeability than the dry part

B: More than the dry part of the optimum area shear is capable

C: Is a dispersed structure

D: Is a puffed structure

(A & C)

Q:) Coefficient of consolidation for clays normally:

(L.M.R.C. JE 2015) A

- ✓ A : Decreases with increase in liquid limit
- B : Increases with increase in liquid limit
- C : First increases and then decreases with increase in liquid limit
- D : Remains constant at all liquid limits

$$C_v \propto \frac{1}{w.L} \quad \uparrow C_c = 0.009(w_L - 10)$$

Q:) The equation  $\tau = C + s \tan \phi$  is given by  
(SJNVL JE 07-10-2018 SSC JE 2009)

A : Rankine

B : Coulomb

C : Newton

D : Mohr

(B)

$$\tau = C + s \tan \phi$$

$$\tau = C + \bar{\sigma} \tan \phi$$

$\tau = f(\bar{\sigma})$   
Coulomb

Q:) Which of the following methods is NOT a type of test to determine the shear strength?

(DMRC 18.04.2018 4.30 pm)

~~A : Three dimensional consolidation test~~

B : Vane shear test

C : ✓ Unconfined compression test

D : ✓ Confined compression test

A

Q:) The graphical method for the determination of earth pressure is:

(M.P. Sub Engg. 4 sep 2018 9.00 am)

☒ A : Rebhann's method

B : Taylor's method → stability slope, C.V.

C : Mohr's diagram method

D : New mark's influence chart method

☒ A- → Vertical stress

Q:) For bulk heads, which of the following earth pressure theory is applied directly?

(SSC JE 27-10-2018 evening shift)

A : Coulbomb's theory ✓

B : Rankine's theory ✓

C : Coulbomb's theory and rankine's theory both

✓ D : None of these

D

Q:) Rise of water table above the ground surface causes  
(H.P. SSC JE 2015) **(G)**

**A:** Equal increase in pore water pressure and total stress

**B:** Equal decrease in pore water pressure and total stress

**C:** Increase in pore water pressure but decrease in total stress

**D:** Decrease in pore water pressure but increase in total stress

$$\sigma = \gamma_{sat} h_2 - \gamma_w h_2$$

( $\gamma_{sub} h_2$ )

Q:) When compared with open caissons, floating caissons generally .....

(SSC JE 23.09.2019 morning)

↳ Shoot. Cofferdam

A : Have a greater depth below the ground surface

B : Have a slow and inconvenient installation

✓ C : Are less expensive

Ⓒ

D : Have a higher loads-carrying capacity

Q:) A settlement of footing under immediate elastic settlement, the influence factor ( $I_w$ ) for circular shape rigid footing is:

(LMRCL ASST. MANAGER 15.05.2018)

A : 1

~~B : 0.8~~

C : 0.9

D : 0.64

**B**

$$S_{\text{immediate Rigid}} = 0.8 \times S_{\text{immediate (elastic)}}$$

Q:) In a standard penetration test the number of blows required for penetration of ground for 15 cm, 30 cm, 45 cm and 60 cm from ground level are 2, 4, 7 and 9. Then the observed SPT value is:

(UPRVUNL JE 2019)

A : 22

B : 11

C : 6

D : 9

$$SPT = \frac{300mm}{15cm - 30cm}$$

$$30cm - 45cm$$

$$SPT = 4 + 7 = 11$$

B.

Q:) The type of bearing capacity failure at shallow depth in very dense sand is called:  
(LMRC JE 13.05.2018 shift-I)

A : Punching failure

B : Local shear failure

C : Combined local and shear failure

D : General shear failure

D.

General shear failure

**Q:) The foundation in which a cantilever beam is provided to join two footing is known as.....**

**(M.P. Sub Engg. Draftman 1 sep 2018 9.00 am)**

**A : Combined footing**

**B : Raft footing**

**C : Strip footing**

**D : Strap footing**

Q:) The maximum intensity of loading that the foundation will safely carry without the risk of shear failure of soil irrespective of any settlement that may occur is called as:

(DDA JE 23.04.2018 first shift)

A : Allowable bearing capacity

B : Ultimate bearing capacity

☒ C : Safe bearing capacity

D : Net loading capacity

☒ C

$$q_s = \frac{q_{nu}}{FOS} + \gamma_{soil} D_f$$

Q:) The figure given below represents the contact pressure distribution on underneath as (UK Combined AE paper-I, 2012)

A: Rigid footing on saturated soil

B: Rigid footing on sand

C: Flexible footing on saturated clay

D: Flexible footing on sand

Flexible →  
Pressure dist  
uniform  
Rigid — Settlement uniform

Rigid-clay

Q:) A load of 4000 kN is uniformly distributed over an area of 3 m × 3 m. Average vertical stress at a depth of 2 m below will be (assuming 2 vertical : 1 horizontal distribution)-

(UTTRAKHAND AE 2013)

A : 250 kN/m<sup>2</sup>

B : 160 kN/m<sup>2</sup>

C : 200 kN/m<sup>2</sup>

D : 220 kN/m<sup>2</sup>

$$\sigma_z = \frac{4000}{5 \times 5}$$

$$160 \text{ kN/m}^2$$

**B.**

Q:) The contact pressure on uniformly loaded circular footing resting on clay, at the centre is:

(UPPCL JE 2015)

A : Sinusoidal

B : Equal

C : Maximum

D : Minimum

Flexible footing

Q:) The minimum settlement that is to be observed for ending teh plate load test is-

(AIRPORT AUTHORITY OF INDIA JE 2015)

A : 10 mm

B : 15 mm

C : 20 mm

☒ D : 25 mm

Q:) Static cone penetration test is usually conducted when the structure is likely to be founded on:  
(ESIC JE 2016)

A : Shallow foundations

☒ B : Pile foundations

C : Drier foundation

D : Improved ground

B.

Skin friction  
Point resistance

Q:) In a grillage footing, the maximum shear force occurs at the  
(IOF JE 2015)

A : Edge of grillage beam

B : Centre of base plate

C : Centre of grillage beam

☒ D : Both A and B

D.

Q:) The \_\_\_\_\_ method of exploration was developed in connection with prospecting useful minerals and oils.

(M.P. Sub Engg. 4 sep 2018 9.00 am)

☒ A : Geo physical

B : Rotary boring

C : Sub surface sounding

☒ D : Pereussion boring

→ Shallow depth  
remould

नहीं चाहिए

depth

Q:) The largest value of stability number  
(LMRC JE 2016)

A : 1

~~B : 0.261~~

C : 2

D : 0.5

(B.)

Q:) Standard penetration resistance in very stiff clays  
lies between:  
(SSC JE 2010)

A : 2 to 4

B : 4 to 8

C : 8 to 15

✓ D : 15 to 30

✓ P.1

15-30  
→ 30

stiff.

Q:) Mechanical stabilization of soil be achieved by which process?

(UPRVUNL JE 09.11.2016)

A : Lime stabilization

B : Cement stabilization

~~C : Proper grading~~

D : Bitumen stabilization

Imp up 1 WL &  
Gravelly sand.  
(OM)

A B, C → chemical stabilization  
Water proofing

**Q:) The most suitable soil for compressed air tunneling is**

**(H.P. SSC JE 2015/Hariyana SSC JE 2015)**

**A : Silt**

**B : Sand**

**C : Clay**

**D : gravel**

Home-work
