**Q : ) The gross diameter of a rivet is the diameter of**

**A : Cold rivet measured before driving**

**B : Rivet measured after driving**

**C : Rivet hole**

**D : None of the above**

**Q : ) Which of the following type of the riveted joint is free from bending stress**

**A : Lap joint**

**B : Butt joint with single cover plate**

**C : Butt joint with double cover plate**

**D : None of the above**

**Q : ) Select the correct statement**

**A : Material cost of rivet is higher than of bolt**

**B : Tensile strength of a bolt is less than that of a rivet**

**C : Bolts are used as temporary fastenings where a rivets are used as permanent fastening**

**D : Reverting is less noisy than bolting**

**Q : ) When the axis of axis load lies in the plane of rivet group, the rivets are subjected to**

**A : Only shear stresses**

**B : Only tensile stresses**

**C : Both (a) and (b)**

**D : None of the above**

**Q : ) When the bolts are subjected to reversal of stresses, the most suitable type of bolt is**

**A : Black bolt**

**B : Ordinary unfinished bolt**

**C : Turned & fitted bolt**

**D : High strength bolt**

**Q : ) Eccentricity of connections introduces:**

**A : Primary stresses**

**B : Vibrating stresses**

**C : Secondary stresses**

**D : None of the above**

**Q : ) As per the Indian standard (IS) 800 : 2007, the partial safety factor for material resistance governed by yielding failure of the steel is**

**A : 1.10**

**B : 1.15**

**C : 1.20**

**D : 1.50**

**Q : ) A plate of size 100 mm × 10 mm having yield strength of 250 MPa. The design strength of plate in yielding of the cross section is**

**A : 167 kN**

**B : 200 kN**

**C : 217 kN**

**D : 227 kN**

**Q : ) The minimum pitch of the rivet shall not be less than**

**A : d**

**B : 1.5 d**

**C : 2.0 d**

**D : 2.5 d**

**Q : ) If the rivet diameter is 30 mm, the diameter of rivet hole shall be**

**A : 31 mm**

**B : 21.5 mm**

**C : 32 mm**

**D : 32.5 mm**

**Q : ) The rivets in a lap joint will be in  
..... Shear.**

**A : Single**

**B : double**

**C : Tearing**

**D : Bearing**

**Q : ) Efficiency of a riveted joint having the minimum pitch as per IS : 800 is**

**A : 40%**

**B : 50%**

**C : 60%**

**D : 70%**

**Q : ) If the thickness of plate to be connected by a rivet is 16 mm, the suitable size of rivet will be**

**A : 16 mm**

**B : 20 mm**

**C : 24 mm**

**D : 27 mm**

**Q : ) The load factor applied to dead loads or live loads in the design of steel structures is-**

**A : 1.3**

**B : 1.5**

**C : 1.7**

**D : 2.2**

**Q : ) In upper bound theorem plastic analysis for a given frame subjected to a set of loads  $P$ , The value of  $P$  which is found to correspond to any assumed mechanism must be-**

**A : Greater than the collapse load  $P_u$**

**B : Less than the collapse load  $P_u$**

**C : Either greater than or equal to collapse load**

**D : None of the above**

Q : ) The effective length of fillet weld is  
A : Total length – 2 × Throat size  
B : Total length – 2 × weld size  
C : 0.7 × total length  
D : Total length – (weld size ×  $\sqrt{2}$ )

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 6:00 PM

**Q : ) The effective length of fillet weld is**

**A : Total length – 2 × Throat size**

**B : Total length – 2 × weld size**

**C : 0.7 × total length**

**D : Total length – (weld size ×  $\sqrt{2}$ )**

**Q : ) Which one of the following is the mode of failure in a fillet weld material?**

- A : Tension**
- B : Shear**
- C : Bearing**
- D : Crushing**

**Q : ) Two flats ( $110 \text{ mm} \times 16 \text{ mm}$ ) and ( $110 \text{ mm} \times 12 \text{ mm}$ ) are welded by double V butt weld. If permissible stress is  $142 \text{ N/mm}^2$ , the strength of weld will be-**

**A : 167.75 kN**

**B : 195.56 kN**

**C : 187.44 kN**

**D : 210.25 kN**

**Q : ) Bolts are most suitable to carry**

**A : Shear force**

**B : Bending moment**

**C : Axial tension**

**D : Shear force and bending moment**

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 6:00 PM

**Q : ) For a standard 45o fillet, the ratio pf  
fillet of throat thickness is**

**A : 1 : 1**

**B : 1 : 1.414**

**C : 1.414 : 1**

**D : 2 : 1**

**Q : ) In the fillet weld the weakest section is the**

**A : Smaller side of the fillet**

**B : Throat of the fillet**

**C : Side perpendicular to force**

**D : Side parallel to force**

**Q : ) If the angle between fusion faces of a fillet weld is  $60^\circ - 90^\circ$ , the effective throat thickness as per Indian standard is equal to:**

**A :  $\frac{1}{\sqrt{2}}$  size of weld**

**B :  $\frac{1}{\sqrt{2}}$  size of weld**

**C :  $\sqrt{2}$  size of weld**

**D :  $\sqrt{3}$  size of weld**

**Q : ) The size of the fillet weld is indicated by**

**A : Side of the triangle of the fillet**

**B : Throat of the fillet**

**C : Length of the weld**

**D : Size of the plate**

**Q : ) Welded connections are preferred to riveted connections because**

**A : They are economical**

**B : Of the ease of connection**

**C : The loss of member strength is smaller**

**D : They reduce the secondary strength**

**Q : ) A steel plate is 30 cm wide and 10 mm thick. A rivet of nominal diameter of 18 mm is driven. The net sectional area of plate is**

**A : 18.00 cm<sup>2</sup>**

**B : 28.20 cm<sup>2</sup>**

**C : 28.05 cm<sup>2</sup>**

**D : 32.42 cm<sup>2</sup>**

**Q : ) The working stress for structural steel in tension is of the order of**

**A : 15 N/mm<sup>2</sup>**

**B : 75 N/mm<sup>2</sup>**

**C : 150 N/mm<sup>2</sup>**

**D : 750 N/mm<sup>2</sup>**

**Q : ) The maximum centre to centre distance between bolts in tension member of thickness 10 mm is**

**A : 200 mm**

**B : 160 mm**

**C : 120 mm**

**D : 100 mm**

**Q : ) A steel member which is subjected to primary tension is called**

**A : Tie**

**B : Strut**

**C : Sling**

**D : None of the above**

**Q : ) Rolled steel tubes are referred by their**

**A : Outer diameter**

**B : Inner diameter**

**C : Average diameter**

**D : Outer radius**

**Q : ) When an equal single angle is used as tension member, the contribution of outstanding leg towards effective area is**

**A : Same as that of connected leg**

**B : Less than that of connected leg by a factor**

**C : Two times that of connected leg**

**D : One and half times connected leg**

**Q : ) The main advantage of a steel member is that it**

**A : Has high strength**

**B : Is gas and water tight**

**C : Has long service life**

**D : All of these**

**Q : ) Consider the following statements.**

- 1. If a lug angle is required for making connection in an angle section tension member, effective area of member will be the gross area of bolts holes.**
- 2. In a double angle tension member with angles of opposite sides of a gusset plate, the net area provided will be same as for double angles on the same sides of gusset plate**

**A : Only (1) is correct**

**B : Only (2) is correct**

**C : Both (1) and (2) are correct**

**D : Neither (1) nor (2) is correct**

**Q : ) In a beam that carries axial load also, that effect of deflection may be ignored, when the axial load is**

**A : Compressive**

**B : Tensile**

**C : Concentrated**

**D : Uniformly distributed**

**Q : ) As per IS : 800 the minimum number of rivets used for attaching the lug angle to the gusset or other supporting member is:**

**A : 8**

**B : 6**

**C : 4**

**D : 2**

**Q : ) For steel members exposed to weather and not accessible for repainting, the thickness of steel should not be less than**

**A : 4.5 mm**

**B : 6 mm**

**C : 8 mm**

**D : 10 mm**

**Q : ) In the case of a tension member consisting of two angles back to back on the same side of gusset plate, what is k equal to? (Area of connected leg =  $A_1$ , area of outstanding leg =  $A_2$ )**

**A :**  $\frac{3A_1}{3A_1 + A_2}$

**B :**  $\frac{3A_1}{3A_1 + 3A_2}$

**C :**  $\frac{5A_1}{3A_1 + 5A_2}$

**D :**  $\frac{5A_1}{5A_1 + A_2}$

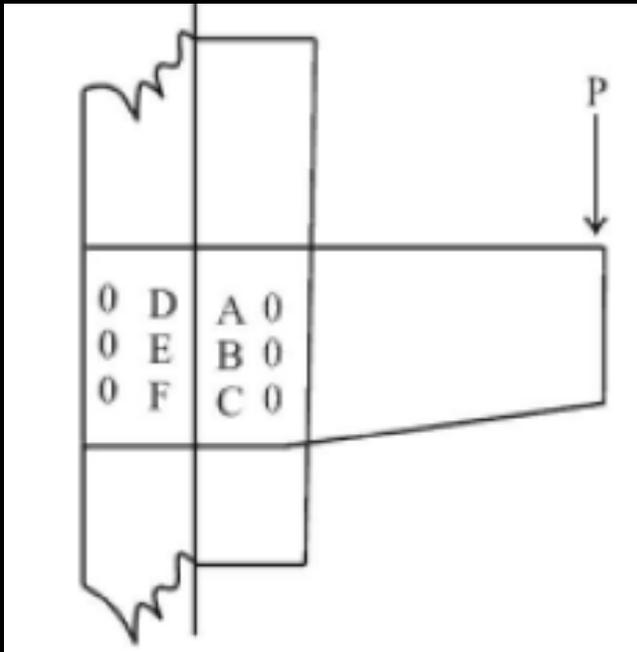

**Q : ) For the eccentric connection of bracket shown In figure, which bolt will have the maximum resultant force?**

**A : Bolt A**

**B : Bolt B**

**C : Bolt D**

**D : Bolt E**

For Any Query Call – 8595517959 | Website – [everexam.org](http://everexam.org)

Daily Class – 6:00 PM

**Q : ) Shape factor is given by**

**A :  $M_y/M_p$**

**B :  $Z/Z_p$**

**C : Both of (a) & (b)**

**D : None of the above**

**Q : ) In the roof for principal rafter most frequently used section is:**

**A : Two channels placed back to back**

**B : One angle and one channel placed back to back**

**C : Two angles placed back to back**

**D : None of the above**

**Q : ) Lap splices are not recommended to be used for rebar diameter above**

**A : 32 mm**

**B : 36 mm**

**C : 25 mm**

**D : 28 mm**

**Q : ) Splices for compression member are designed as**

**A : Short columns**

**B : Long columns**

**C : Intermediate columns**

**D : None of above**

**Q : ) The slenderness ratio  $\left(\frac{\ell}{r}\right)$  of lacing flats is limited to**

**A : 145**

**B : 180**

**C : 250**

**D : 350**

**Q : ) A steel column in a multi-storeyed building carries an axial load of 125 N. It is built up of 2 ISMC-350 channels connected by lacing. The lacing carries a load of**

**A : 125.125 N**

**B : 12.525 N**

**C : 3.126 N**

**D : Zero**

**Q : ) Which of the following is not a compression member?**

**A : Strut**

**B : Tie**

**C : Rafter**

**D : Boom**

**Q : ) Minimum number of battens required in a battened column is**

**A : 2**

**B : 3**

**C : 4**

**D : 6**

**Q : ) In compression member pitch of tacking rivets at a line should not be more than :**

**A : 1000 mm**

**B : 600 mm**

**C : 650 mm**

**D : 700 mm**

For Any Query Call – 8595517959 | Website – [everexam.org](http://everexam.org)

Daily Class – 6:00 PM

**Q : ) In columns lap length is kept as:**

**A : Equal to development length**

**B : Greater than development length**

**C : Less than development length**

**D : None of the above**

**Q : ) To get effective length of a prismatic steel compression member of length  $L$  fully restrained at both the ends,  $L$  is usually multiplied by what factor?**

**A : 0.65**

**B : 0.80**

**C : 1.00**

**D : 1.20**

**Q : ) According to IS 800, the slenderness ratio of the branching member shall be limited to:**

**A : 100**

**B : 60**

**C : 120**

**D : 150**

**Q : ) A per IS : 800-1984, if the diameter of rivets is 18mm, then the minimum width of lacing plate should be:**

**A : 50 mm**

**B : 55 mm**

**C : 60 mm**

**D : 65 mm**

**Q : ) For same load, unsupported length and end conditions a laced column as compared to a battened column**

**A : Is stronger**

**B : IS weaker**

**C : Is equally strong**

**D : Cannot be compared**

**Q : ) Angle of inclination of axis of member for lacing bars shall not be greater than**

**OR**

**The inclination of lacing bars with the axis of the compressive member should not be more than**

**A : 30°**

**B : 40°**

**C : 60°**

**D : 70°**

**Q : ) Effective length of a column is the length between the points of:**

**A : Support**

**B : Maximum moment**

**C : Zero moment**

**D : Zero shear**

**Q : ) The Indian standard (IS) 800:2007 divides various compression member cross-sections into how many buckling classes?**

**A : 1**

**B : 2**

**C : 3**

**D : 4**

**Q : ) If the vertical plane of load coincides with the vertical centroidal axis of the section, the torsion is not developed in the following section:**

**A : An angle section**

**B : A T-section**

**C : An I-section**

**D : A channel section**

**Q : ) Lacing bars in a steel column should be designed to resist**

**A : Bending moment due to 2.5% of the column load**

**B : Shear force due to 2.5% of the column load**

**C : 1.5% of the column load**

**D : Both (A) and (B)**

**Q : ) In a simply supported beam of span  $L$  each end is restrained against torsion, compression flange being unrestrained. According to IS : 800, The effective length of the compression flange will be equal to**

**A :  $L$**

**B :  $0.5L$**

**C :  $0.75L$**

**D :  $0.70L$**

**Q : ) The strength of 'strut' depends on**

**A : Diameter of rivet used**

**B : Thickness of gusset plate**

**C : Net area of strut**

**D : Slenderness ratio of strut**

**Q : ) The most economical section for a steel column is**

**A : Rectangle section**

**B : Solid section**

**C : I-section**

**D : Tubular section**

**Q : ) The effective length of a balanced column can be increases by..... Of the corresponding effective length of similar laced column**

- A : 5%**
- B : 8%**
- C : 15%**
- D : 10%**

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 6:00 PM

**Q : )** If ' $I_b$ ' is moment of inertia of the rolled beam section, ' $A_p$ ' is the area of cover plates in one flange and ' $h$ ' is the distance between the centroid of the top and bottom flange plates, moment of inertia of built-up plate girder is given by-

$$\mathbf{A : 1 = \left[ I_b + 2A_p \left( \frac{h}{2} \right)^2 \right]}$$

$$\mathbf{B : 1 = \left[ I_b + 2A_p \left( \frac{h}{2} \right)^3 \right]}$$

$$\mathbf{C : 1 = \left[ I_b + 2A_p \left( \frac{h}{2} \right) \right]}$$

$$\mathbf{D : 1 = \left[ I_b + 3A_p \left( \frac{h}{2} \right)^2 \right]}$$

**Q : ) In a plate girder, bending moment is resist of-**

**A : Web plate**

**B : Flange plate only**

**C : Flange angle only**

**D : Flange plate and flange angle**

**Q : ) Where the imposed load is variable and exceeds three-quarters of the dead load, arrangements of live load acting on the floor under consideration shall not include which of the following case?**

**A : Imposed load in all spans**

**B : Imposed load on two adjacent spans**

**C : Imposed load on spans under consideration**

**Q : ) The maximum width of a covered steel building section should preferably be restricted to X m beyond which suitable provisions for the expansion joint may be made, where is:**

**A : 50**

**B : 90**

**C : 150**

**D : 200**

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 6:00 PM

**Q : ) In general the depth of plate girder is kept as \_\_\_\_\_ of span**

**A : 1/5 to 1/8**

**B : 1/8 to 1/10**

**C : 1/10 to 1/12**

**D : 1/12 to 1/16**

**Q : ) While designing electricity operated gantry girders, additional load of .....  
Of maximum static wheel load should be used to calculate the vertical load transferred to rails.**

- A : 25% addition**
- B : 10% addition**
- C : 5% redaction**
- D : 10% reduction**

**Q : ) Steel beam should be designed for**

**A : Flexural strength**

**B : Stiffness**

**C : Bulking**

**D : All the above**

For Any Query Call – 8595517959 | Website – [everexam.org](http://everexam.org)

Daily Class – 6:00 PM

**Q : ) The heaviest I-section for same depth is**

**A : ISMB**

**B : ISLB**

**C : ISHB**

**D : ISWB**

**Q : ) Bearing stiffener in a plate girder is used to**

**A : Transfer the load from the top flange to the bottom one**

**B : Prevent buckling of web**

**C : Decrease the effective depth of web**

**D : Prevent excessive deflection**

**Q : ) IN plastic analysis of steel structures,  
at the location of plastic hinge**

**A : Curvature is zero**

**B : Curvature is infinite**

**C : Moment is infinite**

**D : Moment is zero**

**Q : ) Vertical web stiffeners are used in plate girder to:**

**A : Avoid buckling of web plate**

**B : Improve the aesthetic of girder**

**C : Increase the moment capacity of girder**

**D : None of the above**

**Q : ) Limiting deflection for steel becomes supporting floor and false ceiling should be**

**A : Span/600**

**B : Span/500**

**C : Span/325**

**D : Span/200**

**Q : ) The junction between flange and web of an I-section is called :**

**A : Lap joint**

**B : Butt joint**

**C : Fillet joint**

**D : Shear joint**

**Q : ) In case of I-section steel beam:**

**A : Shear capacity of flange is neglected**

**B : Shear capacity of web is neglected**

**C : Shear capacity of both flange and web is neglected**

**D : None of the above**

**Q : ) The plastic modulus of rectangular beam of width 200 mm and depth 400 mm is**

**A :  $2 \times 10^6 \text{ mm}^3$**

**B :  $5.33 \times 10^6 \text{ mm}^3$**

**C :  $8 \times 10^6 \text{ mm}^3$**

**D :  $1.07 \times 10^6 \text{ mm}^3$**

**Q : ) As per the Indian standard (IS) 800 :2007, with respect to serviceability and when transverse stiffeners are not provided, the  $\frac{d}{t_w}$  ratio of the web should be less than or equal too (depth of web =  $d$  ; thickness of web =  $t_w$ ; and yield stress ratio of web =  $\epsilon_w$ )**

**A :  $400 \epsilon_w$**

**B :  $250 \epsilon_w$**

**C :  $200 \epsilon_w$**

**D :  $150 \epsilon_w$**

**Q : ) In a plate girder design, the web contribution to the compression flange area is**

**A :  $A_w$**

**B :  $\frac{A_w}{8}$**

**C :  $\frac{A_w}{6}$**

**D :  $\frac{A_w}{50}$**

**Q : ) Horizontal stiffeners in the plate girders are used to**

**A : Increase the bending strength of the web**

**B : Increase the shear capacity of the web**

**C : Prevent local buckling flange**

**D : Prevent local buckling of web**

**Q : ) As per IS : 800 the maximum deflection in a beam should not exceed**

**A :  $\frac{L}{180}$**

**B :  $\frac{L}{250}$**

**C :  $\frac{L}{325}$**

**D :  $\frac{L}{360}$**

**Q : ) Load factor is defined as**

**A :**  $\frac{\textit{Ultimate load}}{\textit{Yield load}}$

**B :**  $\frac{\textit{Yield load}}{\textit{working load}}$

**C :**  $\frac{\textit{Ultimate load}}{\textit{working load}}$

**D : None of these**

**Q : ) Which of the following section will have largest shape factor?**

**A : Rectangle**

**B : I-section**

**C : Solid circular section**

**D : Diamond section**

**Q : ) For an I-beam, shape factor is 1.12. The factor of safety in bending is 1.5. If the allowable stress is increased by 20% for wind and earthquake load, then the load factor is**

**A : 1.10**

**B : 1.25**

**C : 1.35**

**D : 1.40**

**Q : ) A simply supported beam of span  $L$  supports a connection load  $W$  at its midspan. If the cross-section of the beam is an I-section, then the length of elastic-plastic zone of the plastic hinge will be**

**A :  $L/8$**

**B :  $L/4$**

**C :  $L/2$**

**D :  $3L/4$**

**Q : ) A ductile structure is defined as one for which the plastic deformation before fracture**

**A : Is smaller than the elastic deformation**

**B : Vanishes**

**C : Is equal to the elastic deformation**

**D : Is much larger than the elastic deformation**

**Q : ) As per Indian standard rolled steel I-sections are classified into**

**A : Four series**

**B : Five series**

**C : Six series**

**D : Seven series**

**Q : ) Web crippling generally occurs at the point, where-**

**A : Deflection is maximum**

**B : Shearing stress is maximum**

**C : Bending stress is maximum**

**D : Concentrated load act**

**Q : ) lateral stability of steel beam increases**

**A : Axial compressive stress in beam**

**B : Shear stress in beam**

**C : Bending tensile stress in beam**

**D : Bending compressive stress in beam**

For Any Query Call – 8595517959 | Website – [everexam.org](http://everexam.org)

Daily Class – 6:00 PM

**Q : ) In ISMB – 400, 400 represents the..... of the section.**

**A : Flange width**

**B : Depth**

**C : Weight**

**D : None of these**

**Q : ) The minimum thickness of web in plate girder is ..... Mm.**

**A : 6 mm**

**B : 8 mm**

**C : 10 mm**

**D : 12 mm**

**Q : ) In I-section usually flanges resist**

**A : Tension**

**B : Compression**

**C : Shear**

**D : Bending moment**

**Q : ) Spacing of the vertical stiffeners in plate girder shall be**

**A : Not greater than  $d$  nor less than  $0.25d$**

**B : Not greater than  $2d$  nor less than  $0.25d$**

**C : Not greater than  $1.5d$  nor less than  $0.33d$**

**D : Got greater than  $1.2d$  nor less than  $0.33d$**

**Q : ) In case of laterally unrestrained beams-**

**A : The compression flange deflects laterally**

**B : The tension flange deflects laterally**

**C : The web deflects laterally**

**D : None of the above**

**Q : ) Intermediate vertical stiffeners are provided in plate girders to**

**A : Eliminate the web buckling**

**B : Eliminate the local buckling**

**C : Transfer the vertical loads**

**D : Prevent the excessive deflection**

**Q : ) The shape factor of a rectangular section is**

**A : 1.0**

**B : 1.5**

**C : 2.0**

**D : 3.6**

**Q : ) The flange splice in plate girders be placed preferably near about :**

- A : Maximum shear location**
- B : Maximum moment location**
- C : Minimum moment location**
- D : Minimum shear location**

**Q : ) In plate girders horizontal stiffeners are needed if the thickness of web is:**

**A : Less than 6mm**

**B : Less than**

**C : Less than  $\frac{L}{500}$**

**D : Nearly equal to flange thickness**

**Where d = distance between flanges**

Q : ) If 'M' is maximum moment in the plate girder, 'P' is allowable bending stress and ' $t_w$ ' is the thickness of web, economical depth for a plate girder is given by-

$$A : \frac{\sqrt{M/P}}{t_w}$$

$$B : \frac{1.2\sqrt{M/P}}{t_w}$$

$$C : \frac{1.1\sqrt{M}}{p \cdot t_w}$$

$$D : \frac{1.3\sqrt{M/P}}{t_w}$$

**Q : ) A steel beam is carrying just its self load. It needs to be so supported on two columns (span length,  $L$ ) with equal overhangs ( $y$ ) on both the sides such that the bending moment at the mid-span is zero. The ratio of  $L/y$  should be:**

**A : 0.25**

**B : 0.5**

**C : 1.00**

**D : 2.00**

**Q : ) The width (Thickness) of a gusset plate for the base of the pillar should not be less than :**

**A : 6 mm**

**B : 8 mm**

**C : 12 mm**

**D : 40 mm**

**Q : ) The permissible tensile stress in bolts used for column base is :**

**A : 120N/mm<sup>2</sup>**

**B : 150N/mm<sup>2</sup>**

**C : 0.6  $f_y$**

**D : 0.4  $f_y$**

**Where  $f_y$  is the yield stress**

**Q : ) Where should splices in column be provided?**

**A : At the floor level**

**B : At the mid height of column**

**C : At the beam column joint**

**D : At one-fourth height of column**

**Q : ) The thickness of the base plate provided for a steel column is determined from**

**A : Flexural strength of plate**

**B : Shear strength of plate**

**C : Bearing strength of the concrete pedestal**

**D : Punching criteria**

**Q : ) Rotation of machine foundation about Y, Z and X axes are respectively known as-**

- A : Yawing, pitching and rocking**
- B : Pitching, yawing and rocking**
- C : Rocking, pitching and yawing**
- D : Rocking yawing and pitching**

**Q : ) In a grillage footing the beams in each tier are spaced such that the minimum spacing between the flanges of the two consecutive beams is not less than**

**A : 50 mm**

**B : 75 mm**

**C : 100 mm**

**D : 150 mm**

For Any Query Call – 8595517959 | Website – [everexam.org](http://everexam.org)

Daily Class – 6:00 PM

**Q : ) Gantry girders are designed to resist**

**A : Lateral load**

**B : Longitudinal loads and vertical loads**

**C : Lateral, longitudinal and vertical loads**

**D : Lateral and longitudinal loads**

**Q : ) The permissible bending stress in the slab base of steel column for all grades of steel is limited to**

**A : 165 N/mm<sup>2</sup>**

**B : 175 N/mm<sup>2</sup>**

**C : 185 N/mm<sup>2</sup>**

**D : 200 N/mm<sup>2</sup>**

**Q : ) In the design of a base plate, the bearing strength of concrete as per the Indian standard (IS) 800:2007, is taken as ( $f_{ck}$  is characteristic strength of concrete)**

**A :  $0.4 f_{ck}$**

**B :  $0.45 f_{ck}$**

**C :  $0.5 f_{ck}$**

**D :  $0.60 f_{ck}$**

**Q : ) When wind or seismic forces and considered for structural design, allowable stress in material are generally increased by**

**OR**

**Whenever the earthquake or wind loading is considered in design of member, the permissible stresses may increased by**

**A : 20%**

**B : 25%**

**C :  $33\frac{1}{3}\%$**

**D : 50%**

**Q : ) Yield line theory results in**

**A : Elastic solution**

**B : Lower bound solution**

**C : Upper bound solution**

**D : Unique solution**

**Q : ) The design of eccentrically loaded steel column needs revision if**

**A :**  $\frac{f'_c}{f_c} + \frac{f'_b}{f_b}$

**B :**  $\frac{f'_c}{f_c} - \frac{f'_b}{f_b} < 1$

**C :**  $\frac{f'_c}{f_c} + \frac{f'_b}{f_b} < 1$

**D :**  $\frac{f'_c}{f_c} + \frac{f'_b}{f_b} > 1$

**Q : ) Maximum bending moment in roof purlins is taken as**

**A :  $WL/140$**

**B :  $WL/20$**

**C :  $WL/40$**

**D :  $WL/50$**

**Q : ) In column analogy method, the area of an analogous column for fixed beam of span 'L' and flexural rigidity 'EI' is taken as-**

**A :  $L/EI$**

**B :  $L/2EI$**

**C :  $L/3EI$**

**D :  $L/4EI$**

**Q : ) While designing the foundations of a steel building, the strength and rigidity of the foundation relative to the superstructure will be:**

**A : Lower than the superstructure**

**B : Equal to superstructure**

**C : Higher than superstructure**

**D : Does not have to be in proportion to superstructure**

**Q : ) The maximum allowable deflection in roof purlins is :**

**A : 10 mm**

**B :  $\frac{L}{200}$**

**C :  $\frac{L}{325}$**

**D :  $\frac{L}{400}$**

**Where L is the length of purlin**

**Q : ) Normally, the pitch of roof truss with asbestos sheets should not be less than-**

**A :  $\frac{1}{2}$  of span**

**B :  $\frac{1}{4}$  of span**

**C :  $\frac{1}{7}$  of span**

**D :  $\frac{1}{12}$  of span**

**Q : ) The wind load on a steel truss for an industrial building will depend upon**

**A : Location of structure**

**B : Shape of structure**

**C : Location, shape and height of structure**

**D : Shape and height of structure**

**Q : ) In industrial buildings in northern hemisphere, the advantage of a north-light roof is**

**A : Allow sunlight into the building**

**B : Fully explains the aurora borealis**

**C : Permits diffused daylight into the building and helps avoid glare of direct sunlight**

**D : Allows both sunlight and the prevailing northern breeze in the building**

**Q : ) Which of the following elements of a pitched roof industrial steel building primarily resists lateral load parallel to the ridge?**

**A : Purlins**

**B : Bracings**

**C : Truss**

**D : Columns**

**Q : ) For a bridge having span more than 150m, the recommended type of bridge is**

**A : Riveted plate girder bridge**

**B : Welded plate girder bridge**

**C : Suspension bridge**

**D : Truss girder bridge**

**Q : ) The Indian standard code used for wind load analysis is**

**A : IS 875 part-1**

**B : IS 875 part-2**

**C : IS 875 part-3**

**D : IS 875 part-4**

**Q : ) The design wind speed depends upon-**

- (1) Risk coefficient**
- (2) Topography of the area**
- (3) Size of the structure**

**Of the above**

**A : 1, 2 are correct**

**B : 2, 3 are correct**

**C : 3, 1 are correct**

**D : 1, 2 and 3 are correct**

**Q : ) Racking force on a steel railway bridge is due to**

**A : Tractive effect of the driving wheel**

**B : Braking effect**

**C : Resistance offered by the bearing to the movement at the roller**

**D : Lateral movement of the train when moving on a straight track**

**Q : ) For the purpose of determining the seismic forces, Indian is divided into zones**

**A : 4**

**B : 5**

**C : 6**

**D : 7**

For Any Query Call – 8595517959 | Website – [everexam.org](http://everexam.org)

Daily Class – 6:00 PM

**Q : ) Generally the purlins are placed at the panel so as to avoid**

**A : Axial force in rafter**

**B : Shear force in rafter**

**C : Deflection of rafter**

**D : Bending moment in rafter**

**Q : ) The basic wind speed is specified at height 'h' above mean ground level in open terrain, the value of 'h' is**

**A : 10 m**

**B : 20 m**

**C : 25 m**

**D : 50 m**

**Q : ) To minimize the total cost of a roof truss, the ratio of the cost of truss to the cost of purlin shall be**

**A : 1**

**B : 2**

**C : 3**

**D : 4**

**Q : ) The member which support covering material of a steel roof truss are-**

**A : Rafters**

**B : Purlins**

**C : Struts**

**D : Batens**

**Q : ) The reversible nature of loads are:**

**A : Earthquake loads**

**B : Wind loads**

**C : Both (A) and (B)**

**D : None of the above**

**Q : ) The Indian standard (IS) 800 : 2007 recommends, in taking advantage of reduced design force, that the purlins be designed as**

**A : Continuous beams**

**B : Simply supported beams**

**C : Cantilever beams**

**D : Tension members**

**Q : ) The principal rafter of roof truss is inclined at an angle of  $15^\circ$ . No access is provided except maintenance. The roof is subjected to imposed load of  $0.75 \text{ kN/m}^2$ , the design imposed load is**

**A :  $1.50 \text{ kN/m}^2$**

**B :  $0.75 \text{ kN/m}^2$**

**C :  $0.65 \text{ kN/m}^2$**

**D :  $0.40 \text{ kN/m}^2$**

**Q : ) For heavy vibratory loads in industrial building, the roof trusses are provided with**

**A : Diagonal bracing in the lower chord member**

**B : Diagonal bracing in the upper chord member**

**C : Transverse bracing**

**D : Knee bracing**

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 6:00 PM

**Q : ) AS per IS : 800-1984, an angle section purlin is designed for a bending moment equal to:**

**A :  $\frac{W\ell^2}{9}$**

**B :  $\frac{W\ell^2}{10}$**

**C :  $\frac{W\ell^2}{12}$**

**D : None of these**

**W = Load per meter**

**$\ell$  = span of purlin**

**Q : ) Design of structure should not consider snow load when roof is steeper than :**

**A : 60°**

**B : 45°**

**C : 30°**

**D : 15°**

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 6:00 PM

**Q : ) In a roof truss, the member which supports the purlins is known as :**

**A : main strut**

**B : Main tie**

**C : Main tie**

**D : Principal rafter**

**OR**

**Purlins are supported on the**

**A : Base plate**

**B : Common rafter**

**C : Principal rafter**

**D : Principal rafter**

**Q : ) When purlins are placed between panel points the principal rafter is to be designed for**

**A : Axial compression and tension**

**B : Axial compression**

**C : Axial compression and bending moment**

**D : Axial tension and bending moment**

**Q : ) Distance between purlins on sloping roof depends on-**

**A : Slope of truss**

**B : Type of truss**

**C : Type of roof coverings**

**D : Spacing of trusses**

**Q : ) In a steel roof truss, if angle iron purlin is used its depth should not be less than**

**A :  $1/60 \times$  span of purlin**

**B :  $1/45 \times$  span of purlin**

**C :  $1/60 \times$  spacing of purlin**

**D :  $1/45 \times$  spacing of purlin**

For Any Query Call – 8595517959 | Website – [everexam.org](http://everexam.org)

Daily Class – 6:00 PM

**Q : ) Purlins in roof trusses are designed as..... Members.**

**A : bending**

**B : Tension**

**C : Compression**

**D : Axial**
